

ENERGY PARTNERSHIP PROGRAM

The Energy Partnership Program

Helping City and County Governments Save Money and Energy

Want to cut energy bills, modernize facilities and solve deferred maintenance problems?

By replacing inefficient lighting and heating and cooling systems, many cities and counties already have reduced their yearly energy costs and made their facilities more comfortable and attractive. Energy savings pay for the improvements and, best of all, those energy savings continue, year after year.

Through its **Energy Partnership Program**, the California Energy Commission helps local governments identify and install energy-saving projects. We can provide you with a preliminary assessment of your facilities at no cost. Then, if our assessment identifies cost-effective energy projects, we can share the cost of experienced engineering consultants who can offer you:

- * Comprehensive energy audits and engineering feasibility studies
- * Assistance in selecting Energy Service Companies (ESCOs) and other contractors
- * Reviews of energy project proposals
- * Reviews of proposed project designs in both new and existing buildings
- * Help in preparing equipment performance specifications
- * Assistance in writing bid proposals, and evaluating and reviewing the results

When your local government joins the **Energy Partnership Program**, you receive customized assistance. The Energy Commission's technical staff will provide information on project and funding options **at no cost**. They can help you locate and manage consultants. The experienced staff will review all aspects of the project and will even assist in preparing presentations before your governing board and others.

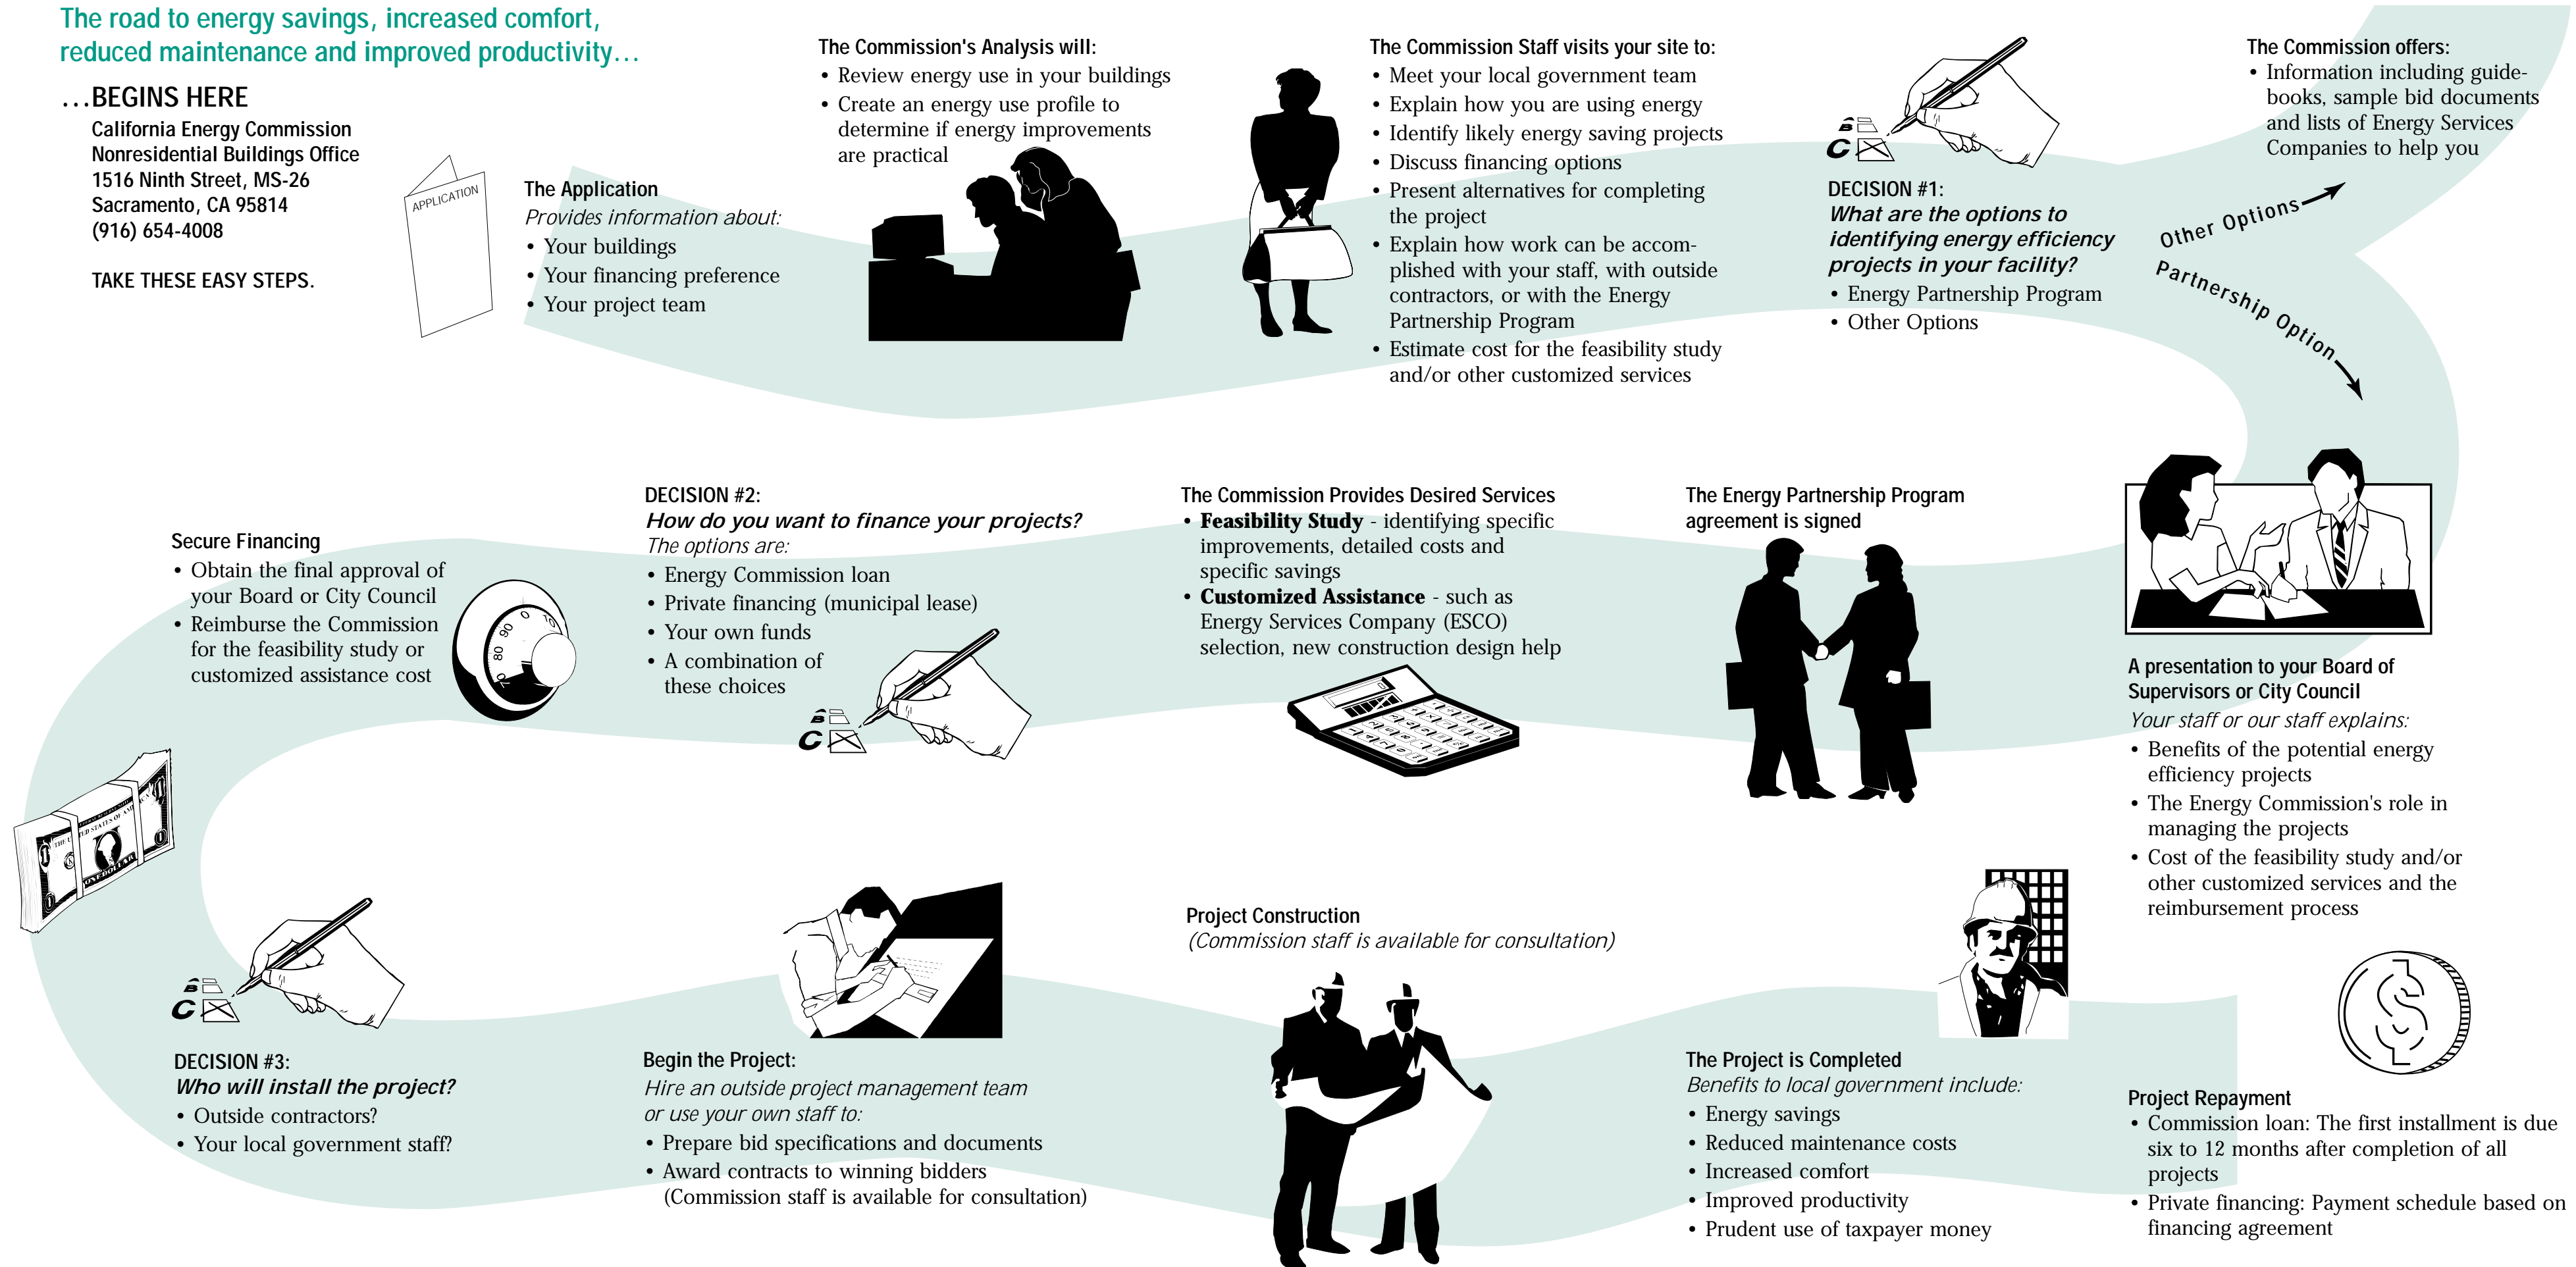

With a proven track record, the **Energy Partnership Program** combines the experience of your staff, the California Energy Commission and outside consultants and service companies. Start the process today to make your buildings more comfortable, more attractive and less costly to operate.

The road to energy savings, increased comfort, reduced maintenance and improved productivity...

TAKE THESE EASY STEPS.

What Cities and Counties Are Saying About the Energy Partnership Program

The best thing about the Energy Commission's program is that it's simple. Participating in the program allowed us to install new lighting and air conditioning in three of our city buildings.

Michael Lee, Director of Finance
City of Rio Vista

The feasibility study we received from the Energy Partnership Program was instrumental in establishing a very successful, on-going energy management program in our City. The program worked for us, real savings occurred.

Michael Grimes, Public Works Department
City of Santa Barbara

The Energy Partnership Program has been great!

Jim Sharer, Facilities Management Department
City of San Bernardino

Excellent support from the California Energy Commission Staff and consulting engineers.

Steve Leane, Deputy Director of General Services
County of Yuba

The California Energy Commission was helpful because they were very responsive and timely. We were very pleased with the support and assistance provided by the Commission.

Tom Dumont, Deputy Director of Facilities Services, County of San Diego

The Energy Partnership Program was the means by which I was able to gain administration and council interest in implementing projects.

Mary Kammer, Conservation/Utilities Department
City of Lompoc

The Energy Commission's Program showed us what we needed to do to cut energy and maintenance costs in our facilities. As a result, the new lighting has brightened our offices and community center. The new chiller has kept us cool and comfortable during the hot summers. All these benefits plus reducing our yearly energy bill. Such a deal!

Mike Knight, Maintenance Supervisor
City of Anderson

Due to projects installed as a result of the Energy Partnership Program, the County's energy consumption dropped so much that the local utility company pulled our meters to have them checked and recalibrated. I was amazed at the effect the projects had on our bill. In the first 12 months of operation, our jail's energy cost dropped by 24 percent!

Dave Sokol, Support Services Manager
Shasta County Jail

What Cities and Counties Are Saying About the Energy Partnership Program

Through the Energy Partnership Program we obtained up-to-date technical information, not always readily available at the local level. This assistance directed valuable time toward the completion of our projects and expedited the cost savings for our City.

Joseph F. Hsu, Director of Utilities
City of Azusa

Our City has always wanted to improve the energy efficiency of its facilities but lacked staff time to start the process. The Energy Partnership Program helped us to move forward with our project. I would recommend it to other local governments.

Tony Dahlerbruch, Director of General Services
City of Beverly Hills

As a result of the Energy Partnership Program, we now have a plan of action that will improve the way we serve our citizens, reduce energy consumption and replace old equipment.

James A. Biery, Director of Public Works
City of South Gate

Due to the Energy Partnership Program, our town's energy costs are lower today than they were in 1992.

Susan Kautzer, P.E., Civil Engineer
Town of Los Gatos

The County stands to save \$350,000 each year as a result of our lighting improvement project-enough to help the County maintain four deputies or to keep a library open. These projects would not be possible without the partnership created between the County, SMUD, and the Energy Commission.

Illa Collin
Sacramento County Supervisor
John Palmer, Energy Manager
Sacramento County

Energy costs are a continuing concern for County officials. As such, the County was looking for ways to cut its \$462,483 annual energy bills for seven of its facilities. We wanted a comprehensive program that would identify and use current technology and equipment for both basic lighting projects and complex heating and cooling project improvements. The process had to be simple and flexible because we wanted to use our own installers and suppliers. The Energy Partnership Program fit the bill and we are on our way to reducing annual energy costs by 30-40 percent without compromising the comfort of our staff and the public.

Timothy J. McSorley, P.E., Facilities Manager
El Dorado County
